Press Release

April, 2008

Intrinsic Perennial Gardens, Inc. is excited to announce the introduction of a new Sedum plant. **Sedum 'Sublime'** is a vigorous hybrid with shiny green foliage in spring. In summer the foliage can take on a thin red edge followed by light pink dome shaped flower heads in September. After a freeze the leaves drop off leaving the strong cinnamon colored stems and seed heads all winter long. The upright clumping plants grow 18-24" tall and wide and prefer a well drained soil in full sun. Their hardiness is zone 4-9. Propagation of this plant is encouraged. For more information contact Brent Horvath at 800-648-2788 or brent@intrinsicperennialgardens.com.
