Press Release

June, 2011

Intrinsic Perennial Gardens, Inc. is excited to announce we found “The Holy Grail” of Silphiums. This golden cup plant makes a stunning specimen growing to 6’+ tall and a few feet wide in time. The foliage emerges chartreuse and brightens in summer followed by yellow flowers in July or August. *The Holy Grail* prefers full sun with rich, moist to average soil. The cup plant is an especially important bird plant attracting bird to drink the water collected at the base of the leaves along the stem and feeding them once they go to seed.
